PE Valve

Continuous Duty Coils

[Indoor Strapped Coils](#)

[Outdoor Canned Coils](#)

[Molded Coils](#)

ETL approved, the PE coils can be energized under normal circumstances without danger of any type of failure. The PE coils can be used with single-phase power systems. Designed for use where high or low ambient temperatures prevail. PE coils are suited for low temperature applications where moisture or humidity are present, where condensation is a problem, and in defrosting systems where fungus resistance is necessary.
